Identify a possible plant problem

Photograph one leaf in good natural light against a plain background.

No leaf image selected

Use camera or gallery to begin

 The plant scanner could not start. Please restart the app.

 AgroScan provides guidance only. Confirm serious or uncertain plant problems with a qualified agricultural adviser.

Detected Condition

Phytophthora

Recommended Actions

Follow product labels and local regulations.
AgroScan guidance is advisory – confirm with an
agricultural professional when unsure.

Built for UK growers

Potato

AgroScan is currently trained on potato leaf images. Use this guide to understand what the scanner can detect and where to find UK-specific support.

Supported Crop

AVAILABLE NOW

Potato

3,076 field photos · 7 problem classes · UK-relevant guidance

More UK crops (tomato, wheat, and others) will be added after new training data is collected.

Detectable Problems

These match the labels returned after a leaf scan.

Phytophthora

Late blight — a major risk for UK potato crops in wet summers.

Virus

Potato virus Y (PVY), leaf roll, and mosaic-type symptoms.

Bacteria

Important

Guidance, Not Diagnosis

AgroScan helps you spot possible potato leaf problems quickly. It is an advisory tool — always confirm serious or uncertain results with a qualified professional.

What AgroScan Is

Advisory Tool

Scan results suggest a possible problem class based on patterns in training photos. They are not a certified diagnosis or laboratory test.

Potato Leaves Only

The model was trained on potato leaf images. Scanning other crops or objects may return incorrect labels.

On-Device Analysis

Leaf photos are processed on your phone. Account details and crop logs are stored using Firebase when you sign in.

Model Limitations

Based on test-set evaluation of the current model (~69% accuracy).

Dark Theme

Reduce glare in low-light conditions

Light mode is optimised for field use in daylight.
Dark mode support will expand in future releases.

AgroScan

Professional plant-health guidance for growers who need fast, reliable insights in the field.
